

# MAGICARD HOLOKOTE

A unique, Ultra patented anti-forgery system which repeats a daylight visible frosted security logo across the whole card face

Available only with Magicard printers

Zero consumable costs

Very low set-up costs and lead times for custom logos

Custom security logos are applied to the card only when the HoloKote encrypted key is attached to the printer

When used with Ultra HoloPatch™ cards the logo is instantly readable in all lighting conditions

The patented  
**Magicard HoloKote™**  
anti-forgery card  
protection system  
eliminates the threat  
of fake IDs and is  
standard on all Rio &  
Tango models

# MAGICARD

# MAGICARD<sup>®</sup>

# HoloKote<sup>™</sup>

The counterfeiting or creation of fake ID cards has never been easier, but now, thanks to Magicard's HoloKote key controlled anti-counterfeiting card protection feature, an affordable solution is available.

Protection from forgery is simple and dependable with Ultra's patented HoloKote system which

cannot be copied or bypassed.

This unique security feature incorporates a repeating frosted security logo into the overcoat laid down during the normal print cycle. When the card is viewed normally, the feature is invisible, revealing only the underlying text and portrait. When flexed or held at an angle to direct light, the feature is clearly visible on the face of the card.

When used with the optional Ultra HoloPatch<sup>™</sup> card stock, one of the security logos is highlighted by a highly reflective gold 'super-diffuser' patch, making the logo clearly visible under all lighting conditions. HoloKote<sup>™</sup> with HoloPatch<sup>™</sup> has an appearance similar to credit card 'hologram' patches.

A standard HoloKote logo is built into the Magicard Rio and Tango card printers, but increased security can be achieved through the use of an encrypted custom logo which is electronically stored in a miniature 'Compact Flash' sized UltraSecure<sup>™</sup> key.

HoloKote costs absolutely nothing to use, and the custom logo turnaround times and set-up charges for UltraSecure keys are minimal. Holopatch cards are also extremely cost effective in view of the the level of protection and visibility gained.
